**RE: Regulatory Status Review of safflower developed using genetic engineering for production of gamma-linolenic acid in the seeds and glufosinate resistance**

Dear Dr. Heron:

Thank you for your letter dated August 19, 2022, requesting a Regulatory Status Review (RSR) for safflower developed using genetic engineering (modified safflower). In your letter, you described that the safflower was modified to impart gamma-linolenic acid production via expression of the delta-6-desaturase enzyme and to contain a selectable marker that confers glufosinate resistance via phosphinothricin acetyl transferase.

The Plant Protection Act of 2000 (7 U.S.C. §§ 7701 et seq.) provides USDA authority to oversee the detection, control, eradication, suppression, prevention, or retardation of the spread of plant pests to protect agriculture, environment, and the economy of the United States. USDA, through the Animal and Plant Health Inspection Service (APHIS), regulates the “Movement of Organisms Modified or Produced through Genetic Engineering” as described in 7 CFR part 340.

Consistent with 7 CFR 340.4, APHIS reviewed your modified safflower to determine whether it is subject to the regulations in 7 CFR part 340. Specifically, APHIS reviewed the modified safflower to determine whether there is a plausible pathway by which the safflower would pose an increased plant pest risk relative to the plant pest risk posed by an appropriate safflower comparator. Based on information you provided (specifically, the scientific name of the plant and its comparator, the genotype of the plant including the sequence and function of the inserted genetic material, a description of the mechanism of action, the intended trait, and the intended phenotype), publicly available resources, and APHIS’ familiarity with safflower and knowledge of the trait, phenotype, and mechanism of action, APHIS considered the (1) biology of nonmodified safflower and its sexually compatible relatives; (2) the trait and mechanism-of-action of the modification; and (3) the effect of the trait and mechanism-of-action on the (a) distribution, density, or development of the plant and its sexually compatible relatives, (b) production, creation, or enhancement of a plant pest or a reservoir for a plant pest, (c) harm to non-target organisms beneficial to agriculture, and (d) weedy impacts of the plant. APHIS did not identify any plausible pathway by which your modified safflower would pose an increased plant pest risk relative to comparator safflower plants. APHIS has determined your safflower is unlikely to pose an increased plant pest risk relative to its comparators. Once APHIS determines that a plant product is unlikely to pose an increased plant pest risk relative to its comparator, and, thus, is not a plant pest or a plant that requires regulation because it is capable of introducing or disseminating a plant pest, APHIS has no authority to regulate it under 7 CFR part 340. Accordingly, your safflower is not subject to the regulations under 7 CFR part 340. APHIS’ determination that this modified plant is not subject to the regulations extends to any progeny of the modified plant that is derived from crosses with other non-modified plants or other modified plants that are also not subject to the regulations in 7 CFR part 340.

Please be advised that APHIS’ decision applies to the safflower developed using genetic engineering exactly as described in your letter. If at any time you become aware of any information that may affect our review of your modified safflower, including, for example, new information that shows the trait, phenotype, or mechanism of action is different than described in your letter, you must contact APHIS for further review of the plant at [RSRrequests@usda.gov](mailto:RSRrequests@usda.gov).

Please be advised that your plant product, while not regulated under 7 CFR part 340, may be subject to APHIS Plant Protection and Quarantine (PPQ) permit and/or quarantine requirements. For further information, you may contact the PPQ general number for such inquiries at 877-770-5990. Your plant

product may also be subject to other regulatory authorities such as the U.S. Environmental Protection Agency (EPA) or the Food and Drug Administration (FDA). Please contact EPA and FDA to enquire about the regulatory status of your product.

Sincerely,

A handwritten signature in black ink, appearing to read 'BJ', with a stylized flourish extending to the right.
