# HOUSING CONDITIONS

## Methodological issues

**The indicator refers to the household**

**There is one respondent in each household answering or filling the questionnaire. This person has to express its views for the household as a whole/unit. In order to minimise problems, we take into account only opinions expressed by the direct respondents to the interview.**

**If one member of the household has a disability and can hardly access a service (which he needs as an individual) ... in this case the access to the service ought to be considered difficult for the household. However, we cannot exclude that a disabled person reports no difficulties if a non-disabled person member of the household fulfils the required task.**

**The survey, although it takes into account the needs of persons with disabilities, it does not make explicit reference to obstacles and architectural barriers. It focusses mainly on distance, diversity, opening hours, etc. The term “accessibility” has a wide sense here.**

**The survey does not take into account the type of disability/limitation**

**Housing conditions and access to basic services refers to the facility/difficulty to obtain these services regardless as to whether they are delivered by internet, phone or 'ordinary shopping'. Distance between home and basic services, opening hours, diversity of services offered, etc. are considered. Disability is only one factor among the above noted ones.**
